TEST YOUR STASH by

Y. Mandias

This the first of a series of articles on subjects of interest. The next few should be of interest to all you depraved dopers out there. Questions and requests for articles, comments, additions and corrections, interesting info of any kind (I would be pleased to hear from technofreaks of any kind, especially underground chemists and budding Cwgley-types), as well as names and phone numbers of easy lays should be sent to TAP, c/o Cz Y. Mandias. Please remember to enclose a S. A. S. E. if you want a personal reply, though I'll reply to interesting letters without one.

First of all, there are a few basic ground-rules one should be aware of if you're into psychedelics. "THC" is almost always PCP (a.k.a. "angel dust"). THC is somewhat difficult to synthesize and expensive and there is a good market. On the other hand, PCP is easy to synthesize, cheap as hell to make and the market, until recently at least, was limited (due to reputed bad side-effects). It doesn't take a genius to figure out the result, given the lack of F. T. C. control over the unscrupulous big-time suppliers. The same can be said of stuff sold as mescaline (unless you live in the SouthWest) and psilocybin, unless you have a good connection. These are usually acid or our friend PCP again. It can be said, however, that acid is usually acid, though as to quality.....

Bearing this in mind, there are a number of simple tests you can perform to ascertain what exactly your head is getting or at least what it's not getting. The easiest of these is the very useful Marquis test (seen in "French Connection") which uses a testing reagent consisting of 20 drops of formaldehyde (available in drug stores) dissolved in 10 ml concentrated sulphuric acid (from drug stores, gas stations or school labs). A drop of this reagent is added to a drop of water on a piece of glass in which is dissolved a small amount (a few grains or fragments) of the substance to be tested. (Note: Quantities and % ages in this and the following tests need not be exactly correct.) Any color changes in the liquid are then noted and compared with the chart. These tests are not absolute proof but they are good enough for our purposes. OTHER TESTS:

p-DMAB Test: Warm a small amount of the substance with a 1 % solution of para-dimethylaminobenzaldehyde (available from a chemical supply house) in concentrated sulphuric acid in a test tube. Note the color. Purple means LSD and related cpds., DMT, psilocin or psilocybin. Yellow means procaine or PCP. Red means THC or cannabis.

Beam's Test: Add a small amount of the substance to a solution of 5 % potassium hydroxide in methanol. A red color indicates cannabis or THC.

Zwikker's Test: To a 1 to 2 ml solution of unknown substance in methanol or ethanol add 1 to 2 ml 1 % solution of cobalt nitrate (or acetate) in methanol or ethanol. Now add 1 or 2 flakes or pellets of sodium hydroxide (lye). A deep violetblue color indicates barbiturates. (The color persists from

1 to 10 minutes depending on cpd.) Strychnine Test: It can be said that for all intents and purposes, there is no strynine in acid and never has been. If you're paranoid though, take a . 5 % solution of potassium dichromate in 60 % sulphuric acid and add a drop of this to a small amount of the unknown on a white tile. Purple changing to red indicates the presence of strychnine.

Chen's Test: This test will give a purple color for phenylephrine, phenylpropanolamine and ephedrine, which are commonly sold as speed and won't get you off. To one drop of a 1 % solution of the unknown in vinegar (diluted with 1/2 water), add 1 drop of 1 % copper sulphate followed by 1 drop 8 % sodium hydroxide (lye). Note the color.

EDITOR'S NOTE: The above article was submitted in longhand and any errors or mistakes are the result of my inability to decipher his handwriting, my lack of drug and chemical knowledge (Who, me? I), and my all-round general stupidity.

there has been so little

credit card counterfeiting to date? According to Frost &

Sullivan, Inc., a New York research outfit, it's because no credit card counterfeiters have yet been jailed. Once they are. these criminals will undoubtedly explain their techniques to others. which is how crime spreads.

Richard Ahern, who researched the subject for Frost & Sullivan, interviewed 76 credit card criminals in four prisons. He learned that how to steal credit cards and use them is now common knowledge in U.S. jails, but how to counterfeit credit cards is not.

Phone company loses SAN FRANCISCO (AP) - The huge Pacific

Telephone Co. came within a few days of seeing its downtown headquarters on the auction block to pay a disputed \$11 debt Louis Gary, who heasts of paying his residential telephone hill at the last minute "as a matter of principle," filed suit against the powerful utility charging it cut off his service without the customary five days notice. He contended that his payment was mailed on

time. "They said they didn't get the payment," said Gary "I said they did They said tough luck and disconnected the telephone When the telephone company admitted in court that it had received the payment but charged him \$11. anyway to reconnect his service. Gary went to City Hall and filed suit in small claims court.

 New York Telephone Co. has issued a warning to "phone phreaks" who use "blue boxes" to illegally avoid long distance charges. The company has developed a computer which detects and prevents the fraud. However, at the news conference the company called to unveil its weapon, the computer malfunctioned. It took 20 minutes to repair the computer.

Wrong subject WENATCHEE, Wash. - A microscopic examination in a biology lab

turned into a police interrogation for a Wenatchee High School student. The class assignment last Friday was inspecting fungi. But a 15-year-old student was charged with possession of marijuana after the biology teacher discovered the "grass" the student was studying intently was the wrong specimen.

Youth Hot Line Reports, Inc. 1979 - Do not make checks out to Youth Hot Line Reports, PLEASE! Movement groups may reprint without permission with TAP's address given with all credits. Please send us a copy of reprinted work.

LETTERS FROM READERS Dear TAP, During the Christman Locak I got or gether with a county of mange who is his has electrical engineering atudes) that work rapping Bell. He kn wo all the intest on it the tall Bloom B / detection system which is available to all early EDD system and can be used on all older systems. On a partial ECC system the testing piece of hardware checks the line with a lot of low frequency signal. This works because; 1) You probably have a resistor leaking some current through to your microphone element. This 10K thm or so is not enough to trip the billing equipment but is less than the Megram or more on an openline. 2) Your Black B x capacitor less the low frequency signal through great! Your capacitor (1 MM) pasces the AC fine and isn't hearty as well higher in the stray capacitance of the phone line as your line recipiance can be. Note; they do this test when your phone is ranging, if they can pass the low frequency signal diwn the line, they will suspect you are Black Boxing. So far we don't know exactly now many ranging telephones can be checked at anyw, but supposedly, a lot since the Isw Trequency Black Box detector need only check your line during ringing and with ECC those kind of "maintenance" checks are easy to implement. Also the exact frequency used is not known. They probably do a DC resistance check and could do an AC check anywhere from 0 - 40 Hz above that and the tone could be heard on the line. Will someone who lives in an area where they know Bell dies this kind of detection try and see if there are extraneous low tones on the line during

ringing. Further, Bell may also do the testing with a high

then) which makes it really easy to measure your line capa-

frequency time during ringing (the noise won't bother you

Now some ideas! First, I don't think they can get a good yes-no result. They might get a signal to monitor your line to be sure. Their measurement capability is limited by two major factors; 1) The stray capacitance between the line from insulation losses, connection points, etc. 2) The ringer capacitor, it should hide your capacitor pretty well. Remembering how it's hooked in. it must be a pretty pig capacitor to let the 20 Hz ringing signal energize the ringer coils. But note, when you hook on your Black Box, you've series connected your I Mfd or so with a big 2 or 3 Mfd so the total capacitance is less than either. Further, the ranger coals have some inductive reactance making the effect of your capacitor even larger. By knowing what a standard capacitance should be, any reading less than haif is VERY suspect! What can we do about it?; Several modifications should help you hide. 1) Put your Black Box in the circuit after the point the ringer is in. This leaves the ringer capacitor on to "swamp" the line. 2) Use a bigger capacitor, then the series effect is not so noticable. This sounds funny I know, but look at the circuit, if this is how the phone company does it, then that's the cure! At about this point I realize that the damn ranger capacitor throws a mankey wrench into the works. Some investigation should be uone on what effect it really has. Think about it and let ,re know what you've heard. We've got to help the thousands

"Hide the wires", Mark

of Boxers in Amerika tromp this menace!!!

Dear TAP.

INC. AFRICATA

and now due to a situation of some urgency I find it necessary to personally respond. A certain Pacific Telephone investigator, Charles Fincher, recently paid a visit to a friend of mine, accompanied by several San Francisco police, who with a search warrent, seized a Black Box after monitoring his phone for an indefir he length of time. Fincher was overheard saying that this was the fifthteenth raid this year in San Francisco. A felony citation was issued because of an alledged \$200 plus "crime" and legal procedings be its next week. Would you be so kind as to inform your readers of the situation in San Francisco and send me any pertinent advice as to a legal defense. Crash

Until last year I was a regular receipient of your reports

Further, the TAP muys and T-shirts are great!

with # 1 #m is the service of its as is a determined to the mailed by the fill I to fine outling the new one of the new or lang reason and to incollect in his car and delices more than happy to explain bot A works (at least how he used it) after he wrote out my ticket. It beems that the State Police in N. J. have been installing the new moving radar units into as many of their cars as possible. Most of the units have been bought with the help of a federal grant. The unit consists of a transmit/receive antenna mounted on a swivel base and a readout unit which contains the electronics for the computations. The unit takes into consideration the opeed of the police vehicle and depending on the direction of the antenna (front or back) either subtracts it from or adds it to the speed of the approaching car. It has an alarm system that can be preset for any speed up to 99 mph and any speed above the set speed will sound the alarm. By the way, the trooper that nailed me had his set for 64 mph on a 50 mph road. Of course local cops don't give you near as much of a break as that, but so far very few of them have Fuzz Buster Barry Dear TAP,

The light I thould pop this note it. Lead than five to light

Since Ma claims to now have the ultimate weapon against phreaking, in the form of a computer program, how about a different method of getting into the system? You wouldn't even need a telephone. Anyone familiar with ham radio knows these guys have their own satellite through which they can talk to other hams over distances not normally possible with the frequencies they're using. The equipment for using these satellites isn't too expensive and anyone who's built any of the projects in TAP can build his own. So what am I driving at? The phone company also uses satellites as well as microwave (which can be tapped into). If some bright soul could come up with the frequencies, orbits, and access codes (if an for these phone booths in the sky, it would be possible to phreak away without ever a worry about getting nailed. I would imagine that some of the frequencies are in the UHF range, which means that if the person using the satellite is using a halfway decent antenna, there's virtually no way to track down the originating signal. Besides, the FCC is too busy chasing HFer's on CB. Ma Bell ain't the only one, either. There are dozens of those birds up there and many of them could just as easily be put to good use as serving the Megaporkers who currently enslave the world. A note about the ham satellite: from what I've read, the thing was built and paid for by donated time and money and

its use is set by cooperative arrangement, making it just about the nearest thing I've seen to people's technology. So don't fuck it up! Enclosing a buck. Hope it'll help. (You bet yer ass it does!)

Postmen stop re-used stamps office. Some people seem, use canceled stamps are give the U.S. Postal Service determined to beat any sys not new Brian noted

At the Cak Lawn post of

SCANNING by Napoleon Solo IN OUR LAND ANDREY WE TALKED AROUT HOW TO FIND THE 800 NUMBER IN-WAIS PRIFICIAL NOW WIRE COING TO TALK ABOUT METHODS BE FINDING INTERESTING 800

MUMMIC. IN ANY 800 EXCHANGE. THE FIRST THING IS THAT OF CHOICE OF EXCHANGE AND WHAT CONSIDERATIONS THERE ARE IN CHOOSING ONE. LHOLLE OF EXCHANGE IS DEFINER AT ON WHAT TYPE OF NUMBER YOU ARE LOOKING FOR SHOW GOT

1. COM UTERS ONE SHOW IN INT HIGH INDUSTRIAL AREAS LINE DALLAS, HOUSTON, SON LEGALISED BOY AREA, L.A AREA, AND LONG ISLAND, N.T., WASH D.C. IS A SHOT I DATE FRACE TO HONT IN.

2. WATS EXTENSES - MINIAPOLIS MINN. MIAMI. ATEANTA, NEW JERSEY, LA ARE ALSO COOK PRACES TO LIBOR. 3. KELDEDINGS - NY, WASH BC, ATLANTA, NJ, CALIF, ALSO, THERE ARE RADIBU NEWS LIFEDS ELC. SOME HETWORKS WILL PUT A NEWS FEED ON AN INHATS IN CASE THE HARD LINE NEWS FFED FAILS FOR SOME REASON.

BUT YOU FAN MEVER IFIL. IT IS ALSO FOSSIBLE FOR THE MILITARY TO FUL AN

ALLOCHM ACTION ON AN INGATS LINE, BUT NOWDAYS IT PROBABLY WON'T BE LIKELY. MUST FEMELE WILL PROBABLY CHOOSE WASH DE AS A PLACE TO START LOOKING FOR INTERESTING NUMBERS. THATS ALL FINE AND GOOD, BUT LETS NOT OVERLOOK FLAGE FILE UJECINIA, MARYLAND AND OTHER STATES CLOSE TO DC. AS THATS WHERE ME I LEVERRAL HE SEECIAL OFFICES ARE LOCATED. ALSO THERE IS A LOT OF STUFF IN

CENTRALLY. LIFE TELLOS WON'T FUT SILVER BOX ACCESS POINTS IN AN ROO NUMBER

WHILE LOOKING FOR INWATS NUMBERS. TWO PASSES SHOULD BE DONE. ONE PASS TO DELIGHTHE THE LIBERT BANKS, AND THE OTHER PASS TO FIND THE NUMBERS IN EGUS BORG. ONCE THIS IS DONE: A SYSTEMATIC METHOD OF RECORDING THE RESULTS THE A DEPT DEVELOPED. WE FIND THAT GRID PAPER IS A VERY NICE WAY TO RECORD THE THE DEMANDER AS AT'S MERY COMPACT AND FAST TO LOOK AT. IT'S USUALLY GOOD PEACLES TO MUMBER THE WORKING BANKS ALONG THE LEFT MARGIN AND THE WORKING WINNEYS WITHIN FACH BANK ALONG THE TOP. 200 MIMBERS ARE SET UP IN BANKS DE 10 NUMBERS, SUPPOSE THAT 800 NUMBERS

20 - 251 2160 INFRIGEN 000 241 3469 ARE BL IN A BANK, THEN THE BANK WOULD M DIE 346 BANK, SEMPLY TAKE THE FIRST THREE DIGITS IN THE SUFFIX (LAST FIND DICTION TO AN ONE NUMBER FAND THAT IS YOUR BANK. NATURALLY, THERE ARE 1969 LODGELLE BORNS BUT NO MORE THAN 250 TO 300 BANKS ARE ACTIVE, THE FRIGHTH THEP. IS TO "SCAN" THEOREM THESE BONKS AND HAVE A RECORD OF ALL THE MORELESS MANES. WITE & BANK IS AN INVALID BONK. THERE WILL BE A RECORDED ANNOUNCEMENT THE MICHI " GOING I THE THIS: "WERE SURRY, DUF TO EQUIFMENT CONDITION, YOUR CALL BOD ." IT . " "S COURT ONNECTED NUMBER) ATTER 1 TO THE OUT BY MILL YOU ELEAST HORE UP AND DIGE YOUR OPERATOR - THIS IS A REFERENCE DIR.". THE "2132" BUHELR HEARS THE SWITCHING MACHINE THAT

SECT THAT RECORDERS WAS IN THE 21'S AREA CODE AND THE "3" IS THE NUMBER BULL PUSICIONETES THE MACRIME. AS THERE ARE USUALLY MORE THAN ONE PER GIVEN A VALID BANK WILL HE ASSUMED AS AND THING FLSE. EVEN IF YOU HEAR SOMETHING BEET FROM IN THE NUMBERS AND DUTS HELF TO COMPLLE A PERSONAL BOO DIRECTORY LIFE THIS; "THE MUMBER YOU DIGITE HAS LEEN DISCONNECTED, PLEASE CHECK WITH TOOK PIELCIDLY OF DIAL YORK OFFICION." AS YOU ARE SCENNING FOR VOLUE DEPICE. YOU SHOULDN'T DO MORE THAN SEVERAL

COUNTRY

A WORD OF WARNING; SCANNING DOES ATTRACT ATTENTION AND SHOULDN'T BE DON'T ON "SUNSTITUE PHONES", LOOKING FOR NUMBERS IS NOT ILLEGAL, MIT USING THEM IS. SO NEVER USE A WATS EXTENDED FROM YOUR HOME PHONE. AS IT'S JUST AS BENCETOUS AS USING A PLUE BOX.

CORFFUEL NOTE TAKING IS A MUST AND THE MORE INFO YOU GET DOWN ON FALLE THE EASIEST TIME YOU WILL HAVE IN EVALUATING THE DATA. DON'T MARK DOWN ANY NON-WORKING BANKS, AS THEY ONLY CLUSTER OF THE PARTS

HUNDRED INVOLID BANKS OF A TIME: RECOUSE SOMETIMES IF TOO MANY PANKS.

ARE DEALED ACCESS TO THE REPORDERS MICHT CAUSE TROUBLE CARDS TO DRUE, THEP-

THE BEST WAY TO BO THIS IS A LITTLE AT A TIME AS IT DECREASES THE CHANCES OF ATTRACTING ALTERITOR. THE MOST ATTENTION GETTING FART WILL BE IN THE SECRETATION OF BONKS, SO PERMAPS IF YOU FOUND ABOUT 50- 100 NON-MUREING BANKS IT BECHT RE A GOOD INFO TO QUIT FOR A WHILE AND DO SOMETHING FLSE. II WILL

ALSO ALLOW ONE TO REACH YOU. THE DICKING SERVENCE MIGHT BE: 800 241 234% WHERE & COURT HE ANY DIGIT

800 211 235% (LET RECORDING) 800-241-2358 CCCL RECORDING 2 800 -241 237X CEET SUMETHING FUSE - "A HAT" A POTENTUAL MORNING BANK !

ROD-241 238X (DET RECORDING) FTC. FIC. FTC, FTC, FTC, FIG. CIC. DO THIS UNTILL EVERY WORKLING BANG HAS BEEN RECORDED. THEN WE CAN NOW GO

BACK AND LOOK FOR THE NUMBERS WITHIN CACH PANE. IN FACT, IT'S NOT BEALLY

MELESSARY TO BUST LOOK FOR THE BANKS AS IF ONE POTENTUALLY VALID BANK IS FOUND. THERE IS NO RESSON WHY WE CON'T GO ENEAD AND LOOK FOR NUMBERS WITHIN THE BANKS OF THEY ARE FOUND. IN THIS CASE IN THE ABOVE EXAMPLE:

800 241 2372 (RING THICE) 800 241 2372 COMST BECTOS CORPERATION > 800-241 2323 (BdSy) ROLFT IF ARY KUMBERS ARE BUSY, MADE SURE YOU RECORD IT IN A SCECIAL FLACE TO THE IT ACADE LATER, USUALLY, A CIRCLE OR UNDERLINE ON THE BUSY NUMBER, BE

800 211-2371 (DISCONNECTED NUMBER)

A "R" IN THAT RUMBER FOR LINE WILL INDICATE THE BUSY NUMBER SO IT CAN BE TO LEFT ACCURA-II THE COMMED SERVED LET IT DALY RING 3 TIMES. IF YOU THINK IT SHOULD RING MORE FOR 1990 READON, THEN LET IT DO SO.

THE REMEMBER WHEN GET THE 100 COST TROUGHTELENESS AT THE FREE FEARING BY 10'S WILL NOW FLIMINATE THE INVALID BANKS.

THE FERNISH LAURED SE REFERRED OF THE EXCHANGE AS YOU HAD OUT ALL COSSITER COMPENSATIONS, IT MIGHT DE A COOR INTO TO MARK DOWN THE COMPANY NUMBERS AS ASSESSED RECORD DEFEND TO CONTACT THAT COMPANY AS MOST COMPANYS.

(Continued on next page)

THIS IS HOW ALL WATS EXTENDERS ARE USED AND HOW MOST COMPUTERS WERE FOUND. AND IS A VERY GOOD WAY+AND THOURAL WAY TO FIND ANY 800 NUMBER IN THE

Competition The seven independent telephone companies in New Jersey might not be as big as Ma Bell, but they provide the same level of service. New Jersey Bell has at least 30 times as many phones as its smaller counter-

Ma Bell Has

parts, but the state's independent companies in some cases charge at The seven independent companies in the state serve 78.118 business and resi-

dential customers with 133,241 (elephones, compared to New Jersey Bell. with almost 3 million customers and 6 million individual telephones. Only two of the non-Bell companies In New Jersey are owned and operated by local people. The other five are subsidiaries of holding companies which operate millions of telephones around

the country. Local Companies The two local companies are the Hillsborough & Montgomery Telephone Co. of Belle Meade and the Warwick Valley Telephone Co. of Warwick, N.Y., which operates the telephone system In parts of Sussex County, But even those two companies serve

more than 5,000 business and residen-

tial customers each in New Jersey and, according to statistics provided by the U. S. Independent Telephone Association in Washington, each grossed more than \$1 million in 1976. Customers cannot pick and choose their telephone company because each utility was granted its own service area

under the Federal Communications Act in the 1930s Rates Are Low Hillshorough & Montgomery Telephone Co. has about 50 employes to serve 6.386 customers with 11.710 telephones.

The company has not raised its \$3.65 monthly residential rate for a dial telephone since 1956. Bell charges between \$6.20 a month and \$7.65 a month for the same service. General Manager Roy Peterson sald numerous long distance calls have enabled Hillsborough & Montgomery to

20 years. The affluent new customers the company has picked up in recent years tend to make more long distance calls than New Jersey Bell customers, Peterson said. The Warwick Valley company serves 5.024 New Jersey customers. "We started in 1902 when a number of farmers began connecting their pri-

keep its basic rates the same for over

vale lines together," said president John W. Sanford. New Jersey Bell officials concede that in some respects the independents do have advantages, mainly because they have smaller free dialing areas

and because many of their customers are more affluent than those in inner cities served by Bell Other non-Bell companies in New Jersey are: New Jersey Telephone Co., United of New Jersey and the West Jersey Telephone Co., all operated by United Telecommunications Inc.: the

Delaware Valley Telephone Co., affiliated with General Telephone & Electron-

les; and the Continental Telephone Co.

New Jersey.

AT THIS TIME YOU START GETTING THE "WERE SORRY, BUF TO EQUIPMENT COMMITTION " RECORDING, YOU CAN NOW SKIP BY 10'S THUS SAVING A LOT OF TIME.

IF GLANNING IN ONE PASS IS DONE AND NO MORE THAN 50 OR SO FAILURES OCCUR IN FINITING A WORKLING BANK, IT'S POSSIBLE TO CONTINUE SCANNING UNTILL ALL THE RUMBERS ARE EDUND.

THROUGH A USCD CAR COMMERCIAL* ITS POSSIBLE TO GO THROUGH 10-20 TRIES DURING

ONE COMMERCIAL. AND IF YOU HULTIELY THAT BY THE NUMBER OF COMMERCIALS IN ONE TY SHOW, IT POESN'T TAKE A MATHEMITICIAN TO REALIZE HOW MANY NUMBERS YOU WILL CO TERROUPH. SCANNING CAN BE DONE ANYTIME YOU HAVE MORE THAN 10 MINUTES TO KILL BY

held this year at the Diplomat Hotel in New York City on Sunday April 22, 1979 from 10:00 AM to 7:00 PM EST. Preregistration by mail is \$5.00 and will be \$7.00 at the door. This fee is needed to pay the costs of renting the ballroom, renting PA's, projectors, etc. If you can't make it to THC-79, you can still get a supporting registration for \$3.00. This entitles you to receive any junk that gets put on our Freebee Table. Supporting Registrations may be upgraded at the door for only the additional \$2.00. Otherwise it's 7 bucks at the door. Dealer tables will be available for those wishing to sell their technological goodies but be forewarned that the people with those funny initials will be there too! Dealer tables are \$20.00. Registration materials will be held at the door so be sure to use a recognizable name. For more details see TAP #53. Please make all checks payable to TAP.

Raymond Allan Williams, 31, is a crook all right, but he does have a cortain flair. Williams, a convicted car thief, escaped from the honor farm at Leavenworth federal prison in Kansas the other day, driving off in a pickup truck he had cadged from the motor pool. He dumped the truck in Kansas City, 20 miles away, and, with some money he had saved, rented a limou-

sine, complete with chauffeur, and was driven to Tulsa, Okla. There, using the limousine service as a reference, Williams rented a suite of hotel rooms for himself and his driver and put all costs on the tab. He lived high for a couple of days, then went to the Tuiss Airport and bought a twin-engine private plane on credit and hired a pilot to fly him to Dallas. By that time, the FBI was on his troil, and he was arrested in Dallas. Despile his escapade, Williams won an accolade from one FB1 agent. "You have to like his style," the agent said.
