by Oz Y. Mandias

 This column is dedicated to the H-Block IRA martyrs ('God save the queen, the fascist regime...') and to the assasin of 'Maximum' John Wood Jr. (named after the type of sentence he hung on drug defendants), the first federal judge to suffer that fate; a .243 deer snuffer that blew his chest open (S&W Model 1500?; as they say in Belfast, 'God made man, Armalite made 'em

equal'). 'Death is the greatest kick of all, that's why they mave it for last.' -- graffito

Julie's In The Drug Squad According to the Christian Science Monitor (4 Sept/80,p.8), the DEA has formed hit teams to nail clandestine drug-making labs in a no. of cities including N.Y., Chicago, Houston, Atlanta, Boston and Wash.DC. You can now pretty well assume that buying any hot precursors will rate an easy bust for the narcs; always make sure your equipment and chems. go through a no. of trusted (and separate) hands before you cook. Also, let the chems. 'cool off' for a month or 2 (or longer), move around a lot and be prepared to start dating your lawyer.

Stings are as common-place as corrupt and/or perjuring narks. Buckeye, Precision Organic and Merrill Scientific (See High Times, March/81), just to name a few, offered'flagged'chems.and

turned in customers.

Anyone interested in either buying or selling anything should write me c/o TAP. Since the 'Better Living Thru Chem.' article, 2 new legal analogues have hit the streets (though they'll soon be illegal, of course): the methyl analog of fentanyl, sold as China White Heroin, and N-ethylamphetamine, sub'ing for the N-methyl deriv., commonly known as 'speed' or 'crystal meth.' They both originated in Calif., the latter undoubtedly via the Angels, according to informed

sources. 'Psychedelic Chemistry', which I've mentioned in past articles is back in print. It's \$15 from Loompanics (Box 264, Mason, MI, 48854), with some new material, but still with a no. of errors, and still far from exhaustive or complete. It's still ,however, the best by far available (at least

above-ground, anyway) if you have the background to understand advanced 'chemspeak.' Media 'The Poor Man's Armourer' is also available from Loompanics for \$17. It is definately worthwhile acquiring if you're into 'rock 'n roll' (full auto) and other facets of improvised, cheap

weaponry. Fuck the boys from BATF. 'The Falcon and the Snowman' (Pocket Books,\$3) is the true story of a couple of young guys , one a coke dealer, who became Russian spies. The protagonist is currently a federal fugitive facing 40 years hard time for his impertinence, and reportedly dealing coke in New England. A fascin-

ating look at the corrupt and evil spooks in the

CIA. Underground Physicist's Corner 'The Secret That Exploded' (Random House, \$16) is the story of the attempt to suppress the H-bomb secret by the authour of the infamous 'Progressive' article, Howard Morland. There's a lot of good info here, including the original article. A triumph for the First Amendment in these dismal times of fascism's rise. 'Basement Nukes' (Loompanics, \$7) is O.K., but far less a book than Morland's. There's also far too

much B.S. political clap-trap added by the authour and not enough technical detail. Send in your plans & info.; UCRL 4725 where are you? Come on Rotow, cough it up! Heavy Scene? If your neighbourhood is like mine, you can get bullet proof vests(Kevlar) for \$85 and up from either: CWS Enterprises, 3824 Kidd Dr, Honolulu, HI 96818 or Survival Equip. Sales,

60 Madison St., Geneva, NY 14456 . Feedback Yeah, how about some? It'd be nice for a change to get some interesting mail instead of just a letter or 2 asking for something. Even if you don't want me to publish it, send it in for 'selective distribution'. There's always a lot of info that wide-spread distr'n would negat -e the useful of, or that's a trade secret. I can dig; I've got some pretty good tid-bit myself that go to the highest bidder. So how's about it; want to trade? L.A. & Bay area TAPers are particularly urged to write; I'm currently in your area. Send all mail to TAP c/o Oz Y.Mandias. Long live outlaw chemistry!

COMPUTER PHREAK-OUT

High! It's been a while since I wrote anything

The Wizard

so I figured I'd keep you up to date on the work down here at Muppet Labs here in The Bronx. I know I promised Tom an article on an auto-dial blue box for your home computer ( I own a TRS-80 but I'll give enough info for you to modify it for any home computer) but due to a lack of time that project is on the shelf. HOWEVER, here's the idea, I've been working on lately. It's a microprocessor controlled brown box. As your handy pocket guide to colored boxes shows, a brown box is a combination of any two or more boxes, this will be a combination blue (of course), red and white (regular 16 key Touch Tone pad), as well as being a calculator. So you can carry it around without being conspicuous, Right now it's just on the drawing board but

here's what I have so far. The box will be designed

around the NSC800 microprocessor from National Semiconductor. This is a new CMOS (low power), processor which will run 2-80 instructions. This is really nice, as I can develop the software on my Trash -80. National also has a new CMOS version of the 2716 EPROM. That's what the program will be stored on . assuming that it draws low enogh current. I'm waiting for National to send me prices and specs now. Otherwise, a regular 2716 EPROM will be used. In this case, when the unit is turned on, the program will relocate itself into CMOS RAM and then disconnect the 2716. Scratchpad RAM and I/O are provided on one chip for the NSC800. Decoding the keyboard will be done by a 740923 20 key decoder chip. The 12 digit output will be done using a multiplexed The audio output can be achieved in two ways.

740912 6 digit driver chip to drive 2 six digit multiplexed LED sticks. Either two output bits on a port can be toggled to give different frequencies or 8 resistors can be attached to an output port to create a D/A converter.

This would give you a sine wave output. From a software standpoint, the program would have to provide four major functions. These are: keyboard input, LED output, sound generation and timing, and math functions,, I havent done any development on software yet

but I have some ideas. First, on power-on the highest priority interrupt will clear all registers and workspaces and then dump you to the keyboard input routine. Numbers which are entered are outputted to the LED display. In order to use the box to generate tones, a special sequence of keys are pushed. Adifferent sequence is pushed for each function, i.e. white, blue or red box. There only has to be one key different for each function so that many sequences do not have to be memorized. The sound generation will probably be done using

the D/A approach. A table of values will be stored in PROM memory(i.e. the 27C16) to approximate a sine wave. Two pointers will be indexed through the table at different rates for the different frequencies. The results will be averaged together and output to the DAC. This will be output (probably through a 714 op-amp) to the battery charger input, using a capacitor to block the DC from flowing into the output. This method can be used to produce any tones needed so that special combinations or single frequency tones can be produced using the same method. Development can be done on the TRS-80. I plan to design and build a shared memory board so the soft-

ware can be developed on the TRS-80, loaded into

of the rame memory.

shared memory and the NSC800 system can be run off

That's all I have so far. If you have any questions. comments or suggestions send them to TAP and Tom will pass them on to me. Stay high and stay happy.

This is the equaning of a new column here at TAP. I will do my damndest to answer reader enquiries on any and every subject that TAP has ever dealt with. I'll also report on various Other research findings, developments, and hallucinations as they occur. Batch & Hose Dep't.: Why not start off with the bad news, right? Jell, I just put the final

THE POSTILY PESSAGE By Messenger E.M.A.

touches on my new blue box... and found that it wouldn't been off 800 nums, though it would been off other long-dist nums. "Tuts!," says I, "it looks like the dirty buggers put in a norch filter that absorbs 2600 and only works on NATS lines..." The next day, I was on Lunch break and decided to may a visit to the local C.O. I dave the switchman a ration of appropriate 35 by way

of introductions, then proceeded to ask a few questions about electronic switching. Lo and Behold, he tells me that all in-JATS traffic coming from Connecticut is now going through a 14E switch. (In case you're wondering, I live in a medium-sized city in FT.1 Anyway, the had news continued as he told me that the entire long-dist system in CT was about to be cut ower to 4E that Friday! I could've had a shitfit right there, but instead feigned enthusiasm and erranged for a CO tour. Thich you will read about in the next issue. if you don't already know, 4K stands for 'Tumber 4 ESS, Dell's new computerised replicement for the old 4A Crossbar long-dist switch that us obreaks know a love a whistle sweet somethings at, 4E uses a type of out-of-band

signalling called CCIS, in which calls are not ectually assigned a voice channel until the called party answers, and in which all information needed to process calls (and trace thom as well) is carried down a separate channel that has no direct connexion to the voice channel. What this means is simply the end of black and blum boxes. You can whistle and been 'til your heart's content, but if it's 40 you'll get exactly nowhere. Thich is why I could be heard cussing all the way home that night. HOWEVER ... like we say, old obreek never die, they just build a different color box. My next one will be red..... ALSO ... it's now five days past due for cutover of the main switcher, which hasn't happened yet, so there may still he some time. Also, rest assured that we're all working hard on new ap-

proaches to the new problem of 40 and when we hit may dire you'll read it first right hers. MATS-New Dep't.: Plenty of interesting research to report. One: Some outgoing TATS lines use SF signalling with 2600. The one I know of is from a certain institution in my town to a nearby big city, which is otherwise a long-dist call. On this TATS, you can disl calls in that city but If you try dialing the digit I first, to call beyond that city, the CADX at the institution whose TATS line it is, will dump you back to a PARK divi tame. ACMEVER, this will not happen ! you been a 2600 pulse quickly, which the PABX doesn't recognise but the UATS line takes as a digit I, and then you can dial-pulse out the rest of the number with no hassie. Here are some interesting nums that a friend and I found in February. I don't know what they're useful for, but if you study the list you'll notice a certain oattern to things. The pattern may give the basis for future hacking that might yield some very interesting nums.

Also, most of these recordings identify the city they are in, so they might be useful for stacking tanders, maybe even for gettine around the 4E problem. All of the following start with the 800 area code. 438-0022: 800 test line for "301 NPA" (Saltimore) 525-0056: ditto for "303 4PA" (Denver) 345-0055; New Mexico special inWATS test 283-0055: 800 svce. tet. line for 217 "PA in Springfield (Mass.) 4A inward MATS test, 228, 445,831, 843, this is a rec., 402-2C. 525-9999; three tones, then "The num you have reached... (readback) is being checked for trouble. Please try again later ... (this has said that since January and still does!)

\$33-0055: #4ESS Minneapolis Office, this is a recording 612-3-SP-1. \$33-0058: ditto 523-9056: InWATS test line for Filthydelphia \$4ESS machine, 215-3C.

Politix: I know most phreak aren't into this

too much these days, but some things need to

is not in suce in trea Code 614. Please check the num... 828-0055: 800 syce test line for 716 Wan(this is in Buffalo 'ly on a 4A) 433-0077: in'CATS test 817-30 (Port Worthless, 362-5715: ring, then 8 rapid beeps, then fast busy signal, a click, silence, back to disitone. 362-5799: (ast busy, milence, more fast busy, more silence, dunn back to dialtone.

\$25-0055 and 2066 are exactly the same thing.

393-0055: The num you have reached, 687-0055,

446-305x (x=0-9) 830 service test line for

804 PA. (Richrond VA)

362-5755: ring, 8 peeps, busy, dung back to dial tone. It seems that 800-362-xxxx in general make good scanning. If you decide to phreak around with any of this, please keep careful records of all your results and report them to "'masencer R.H.A. c/o TAP. Even if you dial something and get nothing interesting, let me know so

others can be informed not to bother trying that num. ALSO: if you hit on something really intense (like a direct line to the White-White-Whitehouse), please don't mess with it too much until we all get a chance to look into it and figure out if it has any really special uses. Uncle Sam Wants You, Dep't.: What Uncle Sam really wants you to do is to keep your nose out of his AUTOVON circuits. But then again, he also wants a lot of us to register for the draft, and do we obey? Hellli No! for a couple of years, a debate has been going around in phreak circles about what tones are used on AUTOVON. Three currently quoted guesses include the 4th column = 1633 hr guess, and the two other quesses that were printed in TAP #60. Take your choice and take your

chances. Anyone who has access to reallive AUTOVON phones is encouraged to let his/her fingers do the walking over the keypad, while taping the tones. Use a small recorder and an induction pickup. Remember to also get the row and column tones individually by pressing two horizontal, on two vertical buttons at a time, going down from top to bottom and then from left to right. He can figure out the frequencies from what's on the tape. Once we figure out how to get deep into AUTOVON, we can try calling our fiends in the Pentagom and telling them exactly what we think about the neutron bomb and the arms race in general. Have fun & don't get caught. General topix Dep't.: A good BS story to use on switchmen in order to get into CO's is this: "Hi there, I'm currently working for an interconnect company installing business phone systems, and I decided I want to move on to bigger & better things like working on Inside Plant stuff for Bell. I'm really into all this new digital stuff... I know you give tours of the works for angin-eering students, so how about...?" Also, by

way of "needing to study up for before you

apply for the job," you might be able to get

hold of some Practices manuals. Send Xerox

copies to TAP, c/o Hessenger R.M.A. If you're into installing phones for yourself and friends, do not buy ITT or Stromberg-Carlson. Nost phones novadays are made like shit but these two companies are really shoddy workmanship. Besides, Stromberg Carlson is a tentacle of General Dynamikkks, a large weapons company. And ITT (which stands for International Tyrrany & Torturn) 'or done everything from building weapons for the Waxis in Will, to engineering the end of democracy in Chile in "73-174. The best nade phones around are the old Automatic Electric #80. If you can still find any. In any case, it's best to buy reconditioned or used phones than new ones, as the fermer were made in the days when they were supposed to be able to survive being drooped out a window .... A good company for all of this and more is SECO, Bohnsack Equipment Company, in Germantown YY. If you go to the warehouse direct, they'll sell you "as-is" for dirt chesp, and the stuff is generally in need on only a cleaning up, and a new line cord.

PENORS - SILVER BOX'S BY THE MAGICIAN... The "monitoring" (wiretapping)

individuals telephone line without their consent,

or without a court order is a vaolation of federal

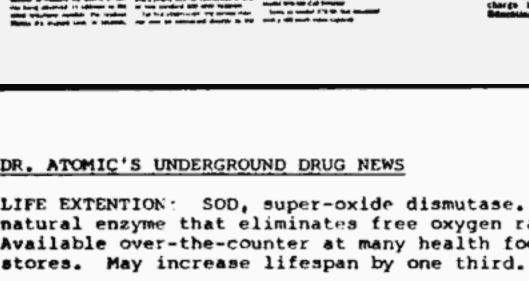

be said. One of them is that the biggest danger of fascism right now comes from further to the right than even Ronald Ray-gum. I'm referring to Jarry Palwell and the Poral (sic) Cajority (sic). Jish-less Jerry is a psuedo-Christian version of the Ayatollah Khomeini and if you think Iran is an uptight place to live. check out Falwell's plans for the C.S. of A. Falwell rans a college, with a name like the Liberty Baptist College, and the place is like a concentration camp. So rock-n-roll, jazz, country-western, or "olk music. Guys must wear their hair above their ears and above their collars. Dress code more intense than many military academies. Strict authority and no student input into decision making. To smoking drinking drugs or dancing. Biolomy classes that teach that the world becan 10,000 years ano. Stostera, Stoatera, You can rest assured that if Falwell and his band of merry misanthrones gain any simulficant power, that most of the things you do in your free time will be verboten, with punishment consisting of "spiritual re-education ... " We as technophream can do a lot to subvert Falwell and his ilk. Fucking up their phone service, remote wiretap via verification, germ warfare in the form of airborne VD in the right places, LSD in their food/water, and so on. Ideas are welcome. Practical ideas that can be used. A lot of this modern racist, fascist shit is sublinated Southorn resentment against the North for having been defeated in the Civil 'Ar. And it capitalises on economic woe like unemployment (Blane the Niggers!! and so on) The Ku Klux Kroens are

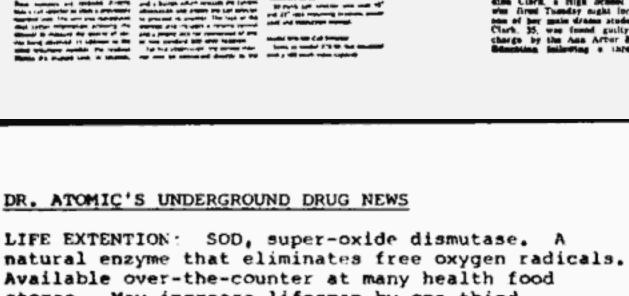

Think of it as Civil Har II and you won't be surprised. You might be interested to know that the right wing is planning to call for a Constitutional Convention, wherein the entire Constitution can be rewritten. This move is gaining support ... you can imagine the kind of things that will be on the avenda... changing the bill of rights so it starts with "The right of all fetuses to keep and bear arms will not be abridgad... Seriously! Remember: Apathy today brings totalitariansim tomorrow. Enough said. FINALLY .... An urgent appeal for all of you out there to dust off your typewriters and start sending stuff in to TAP. If you don't like my political editorialising and would prefer more tech staff, fine: make my editorials disappear by filling the space with schenatix, number lists, and so on. Anything will do. Right now, the Urgent Topix listings include the following: info on ESS and especially 4E.: telco internal numer scannings of 800 nums based on the stuff in this column; into on areas using computers for coin-collect stuff on payphones; info on verify and autoverify

back in Connecticut and spreading like cancer.

and how-to-use; Chemistry: Pyrotechnix; Psychotechnix, and so on.... ALSO: if you're into "radical applications," and are not a Fed or other biggy, contact me c/o/ TAP. Until next month....SLEEEEEP ...ker-chink. --M-ENA Keyed up KUALA LUMPUR (AP) - Mothiar Ahmed brught a new car after his first one was stolen a month age. Yesserday the points told him the stolen car had-been found. When he left his offere to go to police headquarters, he found his new car had been stolen. Arriving at police headquarters, he rectained the first car and reported the theft of the second. THE STEVEL MONITOR

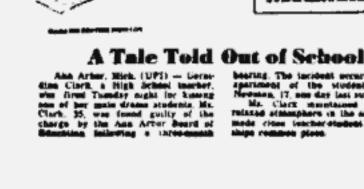

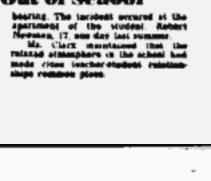

law and panishable by imprisonment for five years, 4 \$10,000 fine, or both. The paly exceptions to the above, are police (in some states), and good of Ma Seil. Some of you may nave nearl of devices called semons which stands for Seaute Observation Syste ... Ther are also sometimes chiled "STLYER BOITCH, nume devices allow supposedly "suthoriced" elaphone employees to firt into them from anywhere, and then using an ordinary touch tons fone, tap into a custowers line RECEIVE OMLY t (IP. The mouthpiece is not booked, up thus it is ·otally silent) and listen to any conversation taking place. It would also be possibly for awrone o dial into seros, key in the proper access code and tap fones it (Though WPFT illegal) . STROB works as tollows: Dial the agener of a press unit. (Apparently Sell occasionally puts them in \$55 information exchanges (F. TTT-555-(TTT) A tone will then be heard for approximately two seconds and then Wilence, It is then nessessity to key in (with rough tone; a 2 to 5 digit security code, holding each digit down at least one second. If the code is not entered within five or six seconds, the REMOD will disconnect, and sust be dialed again. If the code is properly entaced, then another tone

will be beard. A neven figit subscriber fone anober can then be entered (the MENOs can only handle certain "exchanges" which are prevised, so usually one machine cannot conitor as entire FPA). BEROB will then connect connect up to a subscribers line. The listener will hear the low level idle tone. Then as the somitored party dials frotacy or touca tone) the lintener would hear the number being dialed, then the entire conversation! all without detection. When the listener is finishes with the monitoring of that particular Customer, he can then key a single "reset digit" (usually the last digit of the eccess code ) this disconnects him from the sonitored line and returns him to the tone so that he can key in another 7 digit fone number. When the listener is totally finished with fRHSR he keys a single "Atscennect digit" which discensects his from the line being monitored, and disconnects his from 27803 so that the device can reset and be ready for another callet. Secause of PENOBS potential for abuse, both by pareaks and more likely by Bell employees, Sell ham kept 22#0B YERY low key. Hp until 1974, Bell denied ontirely that RENDSS existed. The devices wristency was first made public during hearings on "Telephone Monitoring Printices he rederal idencies" before a subcommittee of the committee on poverment operations. House of Representatives, Sinety-Third Congress June 1974, It has since been stated by Sell that the \$2808 devices are

such as operators, information operators etc. to temp tabs on their performance. 4 H DH M L If any reader should discover a REMOS during his (or her) scanning travels, please keep in mind the VERY strict federal laws regarding wiretapping if you were to be caught using armos to tap peoples fores.
