

# Naked came the crook

A simple man who came to the police to rub a gun station early yesterday was a devious crook. The student was...  
...the...  
...the...  
...the...

## FREEBASING COCAINE

by Dr. Atomic

Freebasing cocaine is basically a California phenomenon, but it's a practice that is popular with other smokers and with other who can afford to indulge in the pleasures of cocaine. Freebase cocaine is smoked in a special glass water pipe called a freebase pipe, and after taking a toke the onset of the high is quick: it comes on faster than snorting and almost as quick as an i.v. injection -- it's like injecting cocaine without using a needle. After inhaling the freebase cocaine vapors, your hearing drops, and you get an incredible rush even before enough time passes to exhale the smoke. Unfortunately, the rush and the high don't last long, and the desire to smoke more coke is compulsive. In fact, it is so compulsive that people who hang around the freebase pipe, impatiently waiting to get another toke, are known in the vernacular as "freebase vultures". But before the cocaine can be smoked, it must first be prepared.

The cocaine purchased on the street is usually cocaine hydrochloride (HCL), a water soluble salt of cocaine that is suitable for snorting or injecting, but not for smoking. Cocaine HCL burns at a high temperature, about 200°C, and if it's smoked, much of the cocaine gets carbonized, burned up, instead of reaching your lungs as vapors. But, by changing the cocaine HCL to cocaine freebase, you get more of the desired cocaine vapors and less carbon because the freebase vaporizes at a much lower temperature than the cocaine HCL does.

All it takes to change the cocaine HCL into cocaine freebase is a little home chemistry. It's easy: if you can bake brownies by following a cook book you can freebase coke. The only supplies needed are some inexpensive chemicals and equipment that are easily obtainable at your local paraphernalia shop.

### Equipment and Supplies

- 1 freebase water pipe, glass
  - 2 screens, fine mesh, for pipe
  - 1 glass freebase vial, 1 oz, with top
  - 1 mirror
  - 1 single edge razor blade
  - 1 box baking soda
  - 1 bottle of petroleum ether or ethyl ether
  - 1 book matches or butane lighter
- NOTE 1: Ethyl ether and petroleum ether will dissolve many plastics, so the tops of freebase vials are specially made of other resistant plastic.

NOTE 2: Use caution when handling ether. The vapors of both ethyl ether and petroleum ether will ignite explosively near an open flame. Make sure that the room is well ventilated in the kitchen, make sure the pilot lights are out on the stove, and the hot water heater if they are nearby. Also, don't smoke or light matches while there are still fumes in the air.

### The Freebase Process

- 1) To a 1 oz glass freebase vial, add 4ml to 6ml of warm water. Less than 1/4 of the vial is more than sufficient water.
- 2) Dissolve 1/4 to 1/2 gram of cocaine HCL in the water to make a cocaine solution. Shake or stir if necessary to dissolve the cocaine.
- 3) Add about 1/4 gram, more or less, of baking soda to the cocaine HCL solution. It is better to have an excess of baking soda than not enough. Next, shake well. This changes the cocaine HCL to the freebase.
- 4) Using a glass eyedropper, add 2ml to 3ml of ether. Shake well. The ether extracts the freebase cocaine from the water layer. As a rule of thumb, use half as much ether as water. Since ether and water do not form a solution, the ether will rise to the top and form a distinct layer.

Room 603  
147 W. 42 St.  
New York 10036  
No. 70

Because the cocaine freebase is more soluble in ether than in water, the ether layer will contain most of the freebase; in effect, the ether has extracted the freebase cocaine from the water layer. This first ether extraction is known as the "first wash". The water layer can be washed one or two more times with ether to extract the small amount of freebase remaining after the first wash.

5) Siphon off the ether layer with the eyedropper, making sure not to take any of the water layer. Drop the freebase saturated ether carefully onto a clean mirror or glass surface. When the ether evaporates, a white powder should remain: this is the cocaine freebase, and it's ready to smoke. So what are you waiting for?

The freebasing process removes some of the water soluble contaminants (cuts) like mannitol and lactose, so the yield, i.e. the weight of the cocaine freebase obtained will weigh less than the cut-coke that was started with; however, no significant amount of cocaine is lost; only the cut is removed. Thus, a gram of cocaine HCL that is only 75% pure is not a gram of cocaine but a 1/4 gram of cocaine, and the yield of freebase cocaine, for this particular sample, will be slightly less than 1/4 gram.

The cocaine freebase, however, is nearly pure, compared to the starting material, and a smaller dose of the freebase will be just as potent as a larger amount of the cut cocaine. So, start with a small hit, a match size line or less (20mg to 50mg). Remember, just like snorting or injecting, you can consume too much by smoking. Be careful how much you smoke, and be careful, too, for police and informers: cocaine is still illegal. Have fun with your chemistry projects, stay high, and stay free.

## Man nabbed in phone fraud

EAST BRUNSWICK - A man was nabbed himself as an electronics engineer has been arrested on charges stemming from the use of a "blue box," a gadget the size of a calculator that emits electronic signals that bypasses regular telephone equipment.

Tarkenton Singh, 50, of 16 1/2 Place, was freed on his own recognizance after he was arrested yesterday for the use of a \$300 worth of phone calls to Japan and Hong Kong.

In addition to the "blue box," investigators confiscated a schematic design of the instrument which they said had been sent to Singh by an acquaintance in West Germany.

"These electronic devices are a continuing problem to the telephone company," Witsack said.

New Jersey Bell Telephone Co. police said Investigator James Witsack of the company's security division in Newark, said the investigation had been in progress for several months. During that time, he said, Singh used the device for \$300 worth of phone calls to Japan and Hong Kong.

Singh was charged with possession of a burglary tool, the "blue box," and theft of \$300 worth of services from New Jersey Bell Telephone Co. police said.

Investigators said Singh had been using the device for several months. During that time, he said, Singh used the device for \$300 worth of phone calls to Japan and Hong Kong.

## DO IT YOURSELF CALL FORWARDING DEVICE

Dear TAP: In response to several pleas from your mail, enclosed is some technical data on the Phone Telephone in Pasadena.

- On Hook: 95 VDC
- Off Hook: 7.5 VDC @ 40 amp
- Rings: approx 50 VAC (My cheap multi-meter doesn't read AC bits)
- U1 (into button) ring: 600 mvms
- U3 (ear piece) ring: 20 mvms (leads feeding earpiece show 80 mvms across them)
- Ringer coil res: approx 30koms. Only one coil.

Ring back at 4105-Hz. (Prefix)-1 (Prefix) sets a weird "ricky-ricky" sound; (Prefix)-0002 sets a nice 1000 cps tone; (Prefix)-1118 sets a real loud ringer (Prefix)-1119 sets a faint ringer (Prefix)-1120 sets a ringer with a tone (Prefix)-1121 sets a ringer with a tone (Prefix)-1122 sets a ringer with a tone (Prefix)-1123 sets a ringer with a tone (Prefix)-1124 sets a ringer with a tone (Prefix)-1125 sets a ringer with a tone (Prefix)-1126 sets a ringer with a tone (Prefix)-1127 sets a ringer with a tone (Prefix)-1128 sets a ringer with a tone (Prefix)-1129 sets a ringer with a tone (Prefix)-1130 sets a ringer with a tone (Prefix)-1131 sets a ringer with a tone (Prefix)-1132 sets a ringer with a tone (Prefix)-1133 sets a ringer with a tone (Prefix)-1134 sets a ringer with a tone (Prefix)-1135 sets a ringer with a tone (Prefix)-1136 sets a ringer with a tone (Prefix)-1137 sets a ringer with a tone (Prefix)-1138 sets a ringer with a tone (Prefix)-1139 sets a ringer with a tone (Prefix)-1140 sets a ringer with a tone (Prefix)-1141 sets a ringer with a tone (Prefix)-1142 sets a ringer with a tone (Prefix)-1143 sets a ringer with a tone (Prefix)-1144 sets a ringer with a tone (Prefix)-1145 sets a ringer with a tone (Prefix)-1146 sets a ringer with a tone (Prefix)-1147 sets a ringer with a tone (Prefix)-1148 sets a ringer with a tone (Prefix)-1149 sets a ringer with a tone (Prefix)-1150 sets a ringer with
